

Faster Activity

Precision Accuracy

Controls Sucker Growth Glyphosate Alternative Tank Mix Compatibility

Shows symptoms very quickly

Safely use around containers and field-grown ornamentals

Controls sucker growth with no known impact on the main plant

Excellent alternative to glyphosate: faster results and lower A.I. per acre

Mix with Pendulum® AquaCap or Tower® herbicides for added residual control

**Finale XL T&O herbicide** is a great alternative to glyphosate products. It has been demonstrated to not volatilize, drift or translocate, so it can be used in the greenhouse with plants present and no worry of plant damage. Weed growth is stopped within hours-to-days of application — with faster symptomology, particularly during cool weather.

## Controls weeds better, faster and with greater control

- Exceptional control of broadleaf weeds
- Rainfast in as little as 30 minutes
- Excellent tank mix partner with preemergent herbicides for residual control

## Control emerged weeds in greenhouses

HRAC Group		Rate Range (% solution)	Rate Range	Formulation	Packaging	Top Weeds
10	glufosinate-ammonium 24.5%	0.4 to 1.25*	27 - 82 fl oz / A*	Soluble concentrate	2 x 2.5 Gal	Crabgrass, dandelion, clover, plantain, and nimblewill

\*Finale XL T&O herbicide's rate range is a function of the size of the weed; maximum rates are for large weeds and brush and perennial grasses. Maximum rate is 5.125 pints per acre. Add NIS and/or AMS for better control of perennial grasses, brush, and large weeds.

## Always read and follow label directions.
