

Millenium Beneficial Nematodes

Millenium *Steinernema carpocapsae* beneficial nematodes protect your plants from damage caused by Shore Flies (*Scatella sternalis*), and a variety of other soil-dwelling insects and borers. They also destroy the larvae of many turf, ornamentals, and tree pests, including flea, billbug and bluegrass weevil larva, as well as cutworm, armyworm, sod webworm, tropical sod webworms and chinch bugs.

Beneficial nematodes are microscopic worms that attack and kill targeted insects, without affecting any other organisms. Within the infected insect, the beneficial nematodes continually reproduce and then spread out for long-term control.

See our product tech sheet for suggested application rates.

Package sizes include trays of 250 million nematodes.

Always read and follow label directions.
