

Nemasys Beneficial Nematodes

Beneficial nematodes are microscopic worms that attack and kill targeted insects, without affecting any other organisms. Within the infected insect, the beneficial nematodes continually reproduce and then spread out for long-term control.

See our product tech sheet for suggested application rates under our research library.

Package sizes include trays of 50 million, 150 million and 5 x 250 million nematodes.

To find out more about beneficial nematodes, access additional information, and discuss recommendations with other growers and industry experts, visit our Nematode News blog.

Always read and follow label directions.
