

Best Practices Guide

Beneficial Nematodes: Keys to Success

- Store nematodes cool: ~38°F/3°C until ready for use
- Check expiry on package and use the oldest first
- Allow nematode packages to come up to room temperature before mixing
- Ideal water temperatures for mixing and applying: 60-75°F (16-26°C)
- Pull screens smaller than 50-mesh on water lines and sprayers
- Ideal spray pressure is ~200-psi or below; do not exceed 300-psi
- Apply mixed nematodes as soon as possible
- Agitate spray mix to keep nematodes in solution
- For sprays that take >2 hours: aerate solution to provide O₂ to nematodes
- YES: Flat fan nozzles, water wands, drip lines
- NO: Mist nozzles, foggers
- Direct sprays to where the pests are: on foliage (for WFT only) or in soil
